

# The LADDER Angle

The Ladder Angle is a product that helps to correct the positioning of ladders, as not only hazardous surfaces cause ladders to slip but also the incorrect angle of a ladder. The Ladder Angle from Ladder M8rix is made of heavy duty durable polypropylene with a highly visible level.

To use this product simply lean ladders against a structure, place the 76° Ladder Angle point side up flat on the underside of the ladder until the bubble is in the centre of the two marks - this indicates that the ladder is at the correct angle. Using the Ladder Angle in conjunction with the Ladder M8rix Industrial, the Professional outside, and the Ladder M8rix Pro-Plus and Ladder M8rix Interior inside, should help to prevent any miscalculations.
