Top Surface Contamination ★	✗	✓	✗	✗
Polished Interior Surfaces (dry)	✗	✗	✓	✓★★

★ Top Surface Contamination use refers to areas where there could be clay, diesel or any residue getting onto the TOP SIDE of the Ladder M8rix that could compromise the standard rubber grip on the base of the ladder. In these circumstances, the Ladder M8rix Industrial is the best option.

★★ Pro Plus (inside case)

The LADDER M8rix Professional

This is an anti-slip device that can be used on most hazardous exterior surfaces such as grass, oily concrete, tarmac, decking, paving slabs, gravel, snow and even solid ice.

The reason it boasts that it can go on all these surfaces is because of the unique 2000 pin base that engages the surface. The top of the Ladder M8rix Professional has an industrial rubber grip with a shoulder to rest the ladder against.

LADDER M8rix Features

The Ladder M8rix is a simple safety device that sits under the feet of your ladder, preventing it from slipping.

Made from durable moulded Polypropylene, the safety device consists of a stainless steel plate secured by galvanised capping screws. The fine metal grips situated on the underside of the Ladder M8rix hold the device in place thus preventing any slippage on the ground surface. Whilst we would not recommend unwise ladder use, the Ladder M8rix provides such a high degree of security that it can even be used on such surfaces as:

Company Background

The LADDER M8rix Industrial

This is an anti-slip device that can be used on virtually all exterior hazardous surfaces. It not only has the unique engaging pins on the base, but also on the top. This can be used in areas where there could be clay, diesel or any residue that could compromise the rubber on the base of the ladder. This means that the pins on the top hold the ladder stable.

LADDER M8rix

The LADDER M8rix Pro-Plus

This is a combination of the Ladder M8rix that can be used on all hazardous surfaces outside, but with the added accessory, the heavy duty rubber on the underside of the Pro-Plus carry case it can be left in the opened case and used on what we call hazardous interior surfaces such as ceramic or marble tiles, laminate flooring, vinyl or even glass floors.

Remembering that the Ladder M8rix should be used in conjunction with the properly opened Pro-Plus carrier case on interior floors only! To use the Ladder M8rix outside, just remove it from the Pro-Plus case.

Health and Safety

Company Background

The LADDER Angle

The Ladder Angle is a product that helps to correct the positioning of ladders, as not only hazardous surfaces cause ladders to slip but also the incorrect angle of a ladder. The Ladder Angle from Ladder M8rix is made of heavy duty durable polypropylene with a highly visible level.

To use this product simply lean ladders against a structure, place the 76° Ladder Angle point side up flat on the underside of the ladder until the bubble is in the centre of the two marks - this indicates that the ladder is at the correct angle. Using the Ladder Angle in conjunction with the Ladder M8rix Industrial, the Professional outside, and the Ladder M8rix Pro-Plus and Ladder M8rix Interior inside, should help to prevent any miscalculations.

EXTRACT FROM THE WORK AT HEIGHT REGULATIONS 2005 STATUTORY INSTRUMENT 2005 No 735

SCHEDULE 6

5. A portable ladder shall be prevented from slipping during use by-

- (A) securing the stiles at or near their upper or lower ends ;
- (B) an effective anti-slip or other effective stability device ;
- (C) any other arrangement of equivalent effectiveness.

8. A mobile ladder shall be prevented from moving before it is stepped on.

Health and Safety

Company Background

Ladder M8 Limited

**Product designer and Award to Industry Winner 2003
Graham Robinson formed Ladder M8 Limited in 2003 to
develop a range of products within the health and safety
environment.**

The company launched it's range of the Ladder M8rix anti-slip devices in 2003, and in the two years since it's original products were introduced the Ladder M8rix 'professional' and 'industrial' models have earned a reputation for safety, reliability and ease of use on a wide range of surfaces.

The reputation is enhanced by our proud claim that in the two years that Ladder M8rix products have been on the market there have been NO REPORTED LADDER ACCIDENTS where the Ladder M8rix have products have been in use! Increasing numbers of companies, county councils, and utility companies are relying on the Ladder M8rix devices to fulfil their safety requirements, and Ladder M8 Limited supplies some of the largest companies in the UK.

Companies today operate in an environment where there is an increasing awareness of the dangers of working at height and the responsibilities incumbent on employers by legislation such as 'The Work at Height Regulations 2005'.

Ladder M8 Limited's aim is to provide a range of ladder safety products, which enable employers to provide an environment for the safe and effective use of ladders. As part of our commitment to health and safety the company has just launched a further two Ladder M8rix models which further increase the range of surfaces on which our products can be used.

Ladder M8 Limited has also recently developed for inclusion in it's product range the Ladder M8rix 'Ladder Angle', the unique design of which enables ladder users to simply and accurately confirm that a ladder is positioned at the recommended safe angle for use.

Ladder M8rix - because it's a long way down!
